Profile

Full Stack Developer with 2 years of experience building financial platforms and ERP systems. I work with Java and Node.js on the backend, React and Angular on the frontend, AWS, and applied generative AI.

Professional Experience

Anka Tech | Full Stack Developer Sep 2025 - Present

Software house specialized in investment advisory firms.

Built generative AI features with OpenAI, such as a natural-language search over the client base that turns questions into validated filters, without sending any personal data to the model.

Developed the monthly commission engine with configurable rules per advisor, eliminating manual errors.

Built daily ETL pipelines on the BTG API with AWS Lambda, consolidating 3 data sources.

Implemented OAuth2 with SSO and role-based access control (RBAC), isolating data per advisor and team.

Built a Spring Boot and Angular portfolio module where advisors track client positions and returns in real time, with WebSocket market quotes under 200 ms.

Stack: React, Next.js, Node.js, TypeScript, Java, Spring Boot, Angular, PostgreSQL, AWS

Audax Electronics | Junior Full Stack Web Developer Oct 2024 - Sep 2025

Manufacturer that designs and builds custom LED solutions for major brands.

Developed the company's internal ERP, with 10 microservice modules (production, purchasing, logistics, controllership, quality and CRM).

Built the pipeline that syncs 25 TOTVS Protheus tables with queuing and automatic scheduling, eliminating 4 hours of daily manual work for the IT team.

Made the ERP's most-used screens over 15x faster, from ~7 s to under 400 ms, by optimizing PostgreSQL queries and indexes.

Cut operational report generation from ~30 min to under 5 s with dynamic PDF generation.

Stack: Java, Spring Boot, Angular, TypeScript, JPA Hibernate, PostgreSQL

SOC - Occupational Health and Safety Software | Support Intern Oct 2023 - Jun 2024

Provided technical support to users over chat and phone, logging and escalating tickets.

Projects

RPGForge AI rpgforge-ai.vercel.app

AI-powered RPG character sheet platform, with RAG-grounded generation on pgvector, output validated by Zod schemas, a custom rules engine, per-token cost tracking and 271 automated tests.

Technologies: TypeScript, Next.js, NestJS, Prisma, PostgreSQL, pgvector, OpenAI, Docker

Skills

Languages: TypeScript, JavaScript, Java, Python, SQL

Backend: Node.js, NestJS, Spring Boot, FastAPI, REST, WebSocket, Microservices

Frontend: React, Next.js, Angular, Tailwind CSS

Data and Cloud: PostgreSQL, MongoDB, MySQL, AWS (Lambda, API Gateway, S3, RDS, ECS, CloudWatch), Docker

AI: OpenAI API, RAG, pgvector, Embeddings, Structured Outputs

Education and Languages

Catholic University of Santos, Computer Science

Jan 2021 - Jun 2025

Cambridge Assessment English, English Certificate CEFR B1
